

IP Telephony

IP telephony is essentially an advanced voice transmission technology service that allows you to make a phone call over an existing Local (LAN) or Wide Area Network (WAN) as opposed to using the regular landline phone system. Of course, this technology requires the installation of specific software and hardware, however the end result is well worth the investment. Companies, schools, and private citizens are realizing how cost effective IP telephony can be, and the number of services and features offered with this technology is unparalleled.

When IP telephony was first introduced, the clarity of sound was not up to par, and this deterred people from using it. In addition, the costs for this technology were much higher in the beginning, which was simply another deterrent keeping consumers from trying IP telephony. However, over time, many improvements have been made, and users can now expect crystal-clear audio sound in real time.

The Advantages of IP Telephony

With IP telephony, companies and school systems are realizing that they can better manage calls across a network with the smart voice system that virtually eliminates failure along any single point. Furthermore, the ability to integrate various elements of a system, such as telephones, applications, and gateway controllers, into a single management interface can drastically reduce administrative costs. Furthermore, the IP telephony system is feature-rich, allowing users to control calls and meetings in a simplified manner for better organization.

Probably the most appealing factor to IP telephony is its ease of use. At CameraWATCH Corporation, we realize that a system is only beneficial to a customer if it is easy to use. A complicated system will only frustrate the customer and deter him or her from wanting to use IP telephony technology altogether. Therefore, we have made it our priority to take the guesswork out of this technology so that everyone can feel comfortable using it. We can recommend certain products and services to you based upon your needs, and we are always available if you have any questions whatsoever about your product. Please feel free to contact us at 1-866-420-4232 if you have any concerns regarding this technology or visit us on the web www.camerawatch.net.
