

Today technology makes the teacher more important than ever. Not just any teacher, but highly accomplished, highly skilled teachers are required to reach every child. In many schools educators are using the CameraWATCH Alternation Education Solution to help students learn and grow in ways necessary for success in the 21st century.

This solution is set up in each classroom that will be providing instruction for the alternative student in another location. A call is established between the teacher's classroom and the system. This enables the student to view the class in real-time. For each session the system has to be configured with the proper schedule and classroom to be viewed.

The Alternative Education Solution has already proven itself to be the answer to shrinking budgets and overcrowded classrooms. We proudly announce the development of our new software interface "**Link Director™**". This software provides automatic connections for alternative school/classroom sessions, without the teacher having to learn a new technology. Its inclusion in your Alternative Education Solution package assures all your sessions are activated automatically and effortlessly. The teacher no longer has to place or configure the call session. He/she only has to look at the unit to ensure the light is on.

What a time saving development! NO MORE---manual calling and session scheduling. NO MORE---wondering ----has my class schedule been input into the system? Did I make the call correctly? Did I dial the right student? **LINK DIRECTOR™** has taken care of it all for you.
