

Video Conferencing

Video conferencing is widely used in the corporate world as well as in the educational realm. The introduction of video conferencing has opened up a host of options to both companies and educators who require better modes of communicating that are cost effective and efficient. Large businesses have adopted this new technology because it allows them to conduct meetings in real time, keeping key players within a corporation informed at all times.

Furthermore, video conferencing has allowed many businesses to practically do away with the need to travel for important meetings. It used to be that large corporations had to fly their top executives around the country to attend vital meetings with other branches or with clients. The cost of these jet-setting corporate meetings added up significantly over the course of year, as executives required airfare, hotel accommodations, transportation, and of course, meals. With video conferencing, the need for company executives to travel is almost nonexistent, as key players can debate important topics in real time, via the Web.

Video Conferencing for Reduced Costs

Many school districts have found video conferencing to be cost effective as well, as they are able to offer students a variety of classes that would not otherwise be available. In addition, video conferencing is used extensively for staff development, as teachers can undergo further job training without ever having to leave their schools. Both classes and teacher training are carried out in real time, which provides immediate interactive responses from both sides.

Students can go on virtual field trips and take part in multi-school projects, without ever leaving the premises. Video conferencing enriches the learning experience for students who might not have the opportunity to study certain subjects otherwise. This is often the case with Honors and AP courses. If you are interested in learning more about video conferencing technology, please feel free to contact us at info@camerawatch.net, or toll free at 1-866-420-4232. We at CameraWATCH would welcome the opportunity to speak with you further about all of our products and services that may help you run your organization with greater efficiency or visit us on the web www.camerawatch.net.
